

## **COVID Safety Guidelines – Sport and Recreation**

## Phase 5, Version 1.0 23 June 2021

The WA Government has implemented a staged lifting of COVID-19 restrictions based on the advice of the WA Chief Health Officer.

While there are very few active cases within WA and there have been no local cases of COVID-19 in WA since 1 May 2021, it is still important to maintain COVID-safe principles and sensible safety precautions including good hygiene, additional sanitisation and physical distancing. This will ensure that if new cases do occur, the risk of the transmission of the COVID-19 infection is minimised.

Premises that were closed by directions under the *Emergency Management Act 2005* were required to complete a COVID Safety Plan prior to reopening and display a COVID Safety Plan Certificate.

Premises that were not required to close by directions made under the *Emergency Management Act 2005* may choose to voluntarily complete a COVID Safety Plan, and display a COVID Safety Plan Certificate.

With the introduction of Phase 5 and the further easing of restrictions, it is appropriate for businesses to review their COVID Safety Plans. The introduction of Phase 5 removes the remaining capacity restrictions in place for businesses and venues including the removal of the 2sqm rule.

This document provides guidance on the elements of the COVID Safety Plan, and outlines the safety requirements specific to Sport and Recreation venues, and/or the ongoing operations of sporting activities.

These guidelines are effective from 12.01am, 23 June 2021.

## Safety requirements

All people and premises are required to mitigate the risks of COVID-19. In addition to having a COVID Safety Plan and displaying a COVID Safety Plan Certificate, Sport and Recreation premises must:

- maintain contact registers;
- maintain hygiene and frequent cleaning; and
- carefully manage shared spaces to encourage physical distancing.

We all need to do our part to comply with these requirements and help mitigate the risks of COVID-19.

## **COVID Safety Plan**

The purpose of the COVID Safety Plan is to help ensure that businesses actively mitigate the risk of COVID-19 in line with the best available health advice. In the plan, you will need to explain how your business will take steps to implement the requirements and the advice set out in these guidelines.

As WA has transitioned to Phase 5, you are required to update your COVID Safety Plan for your business and have it available for inspection upon request by an authorised officer. If your business has multiple premises you must prepare a COVID Safety Plan for each premises.

You must also display a COVID Safety Plan Certificate in a prominent location visible to patrons. The certificate is provided at the end of the COVID Safety Plan template.

If required, safety plans should be developed in partnership with your governing body, land/property manager and/or local government (noting the local government may also fulfil multiple roles).

COVID Safety Plans are an important part of ensuring that businesses continue to operate in a COVID Safe manner and minimise the risk of spreading COVID-19. Failure to complete a COVID Safety Plan may mean your business is putting the community at risk. Authorised officers under the Emergency Management Act have the power to close premises, and businesses that put the community at risk in this way.

## **About COVID-19**

COVID-19 can be spread from person to person through close contact and droplets including:

- direct contact with an infected person;
- contact with droplets from an infected person's cough or sneeze; and
- touching contaminated objects or surfaces (like doorknobs or tables), and then touching your mouth or face.

There is increasing evidence to suggest that COVID-19 can spread through aerosol transmission, and specifically in poorly ventilated or crowded indoor settings where individuals likely spend longer periods of time.

As COVID-19 can be spread person-to-person through coughing, sneezing, touching contaminated surfaces, and close contact with infected individuals, there is a need for businesses to remain vigilant with cleaning and sanitising regimes and take extra care with maintaining and promoting safe food and hygiene practices throughout business operations.

The most effective measures to prevent the spread of coronavirus are good hygiene practices, additional sanitisation regimes and physical distancing.

The most effective measures are good hygiene practices, additional sanitisation regimes, social distancing, staying home if unwell, getting tested if you have symptoms consistent with COVID-19 and getting vaccinated.

## 1. Physical distancing

Physical distancing is one of the most effective methods of reducing the spread of viruses. The more space between you and others the harder it is for the virus to spread.

Physical distancing can be used in the work place to minimise the risk of transmission. If a person in is found to be positive for COVID-19, the risk of transmission to others is minimised if physical distancing has been practiced.

While not mandatory, you are encouraged where practicable to maintain 1.5 metres separation between people who are not from the same household or groups of other patrons.

## **Managing shared spaces**

Where there are points of congregation or potential congestion, such as walkways, bathrooms, shared facilities, points of entry and exit, and payment areas, venues can consider:

- using signage and barriers to direct and manage the flow of traffic.
- implementing a one-way traffic flow, such as a dedicated entrance and exit, to reduce congestion.
- reconfiguring the venue layout, for example by reducing the amount of seating or rearranging furniture, to allow for and encourage physical distancing.
- the placement of furniture and equipment removing tables, chairs, bar stools, entertainment equipment and anything else that may result in patrons clustering in small spaces without maintaining the required distance.
- increased cleaning of communal amenities, such as bathrooms and change rooms
- the timing of payment and managing payment areas to ensure customers are not queuing to pay.

## Managing patrons entering the venue

Ingress and egress of outdoor or indoor venues should be managed to ensure physical distancing. One-way traffic flow such as one dedicated entrance and another dedicated exit (where possible) can help minimise congestion.

Where patrons queue, such as at the entrance and service counter, consider providing markings on the floor 1.5m apart to show patrons where they should stand. Markings can be in bright colours or a pattern that stands out. Procedures can help ensure these physical distancing measures are adhered to.

Venues can consider using easily visible signage to:

- tell patrons not to enter the premises if they are unwell;
- encourage patrons within a group to also practise physical distancing;
- direct patrons to follow the physical distancing principles; and
- avoid patrons crowding together in any one area of the business.

It is recommended that any patron who appears to be unwell is requested to leave the premises.

## Managing interactions between sporting participants and spectators

Sporting organisations should review their 'return to play' documentation to ensure it is compliant with the current COVID safety guidelines. Spectator management should be a consideration. Consider staggering starting times for training sessions to avoid congestion.

## Managing interaction between staff/volunteers and patrons

In order to serve and interact with patrons, staff/volunteers may need to move within 1.5m. In these situations, staff/volunteers can consider avoiding direct contact and minimising face to face time in order to reduce the risk of transmission. If staff/volunteers come into direct contact with patrons, staff/volunteers should follow good hygiene practices such as hand washing and cleaning.

## Physical distancing between staff/volunteers

Businesses should ensure that staff/volunteers stay at home if they are unwell.

In addition to practising good hygiene and cleanliness, the following approaches will minimise the risk of transmission of communicable diseases in the work place and maximise continuity of business:

- encourage staff/volunteers to get vaccinated as soon as they are eligible;
- review scheduled classes, rehearsals, training arrangements to reduce interaction consider small teams working separately from one another, including staggered start and finish times;
- physical distancing during break times encourage physical distancing when using lunch or dining room facilities or communal areas;
- encourage the physical distancing protocol of 1.5m across the sport and recreation venue as well as outside the workplace; and
- staff/volunteers should consider getting an annual flu vaccination.

#### **Barriers**

In instances where physical distancing may not be possible, physical barriers like perspex screens may potentially reduce exposure between staff/volunteers and the public. However, the effectiveness of such measures against COVID-19 is still not known. There may still be the potential for transmission, depending on the type of barriers introduced and other considerations such as air currents in the vicinity. Perspex screens may stop droplets

landing on staff/volunteers, but surfaces may still be contaminated. Therefore, these screens will be more effective when used in combination with good hand hygiene and regular cleaning.

## 2. Hygiene

#### Cleaning hands

Regularly washing hands is an effective way to prevent the spread of germs and virus.

If cleaning your hands with soap and water:

- Lather for at least 20 seconds. Pay attention to the backs of hands and fingers, fingernails and the webbing between fingers.
- Rinse hands under running water and dry hands with a clean towel, or fresh paper towel.

If cleaning your hands with an alcohol-based hand rub (hand sanitiser):

- Apply enough product to cover both hands.
- Rub all surfaces of both hands until they are dry.

Consider providing an alcohol-based hand sanitiser for customers at the entrance to the sporting facility. Alternatively, a hands-free hand basin with liquid soap and paper towels could be supplied for customer use.

Spitting and clearing of nasal/respiratory secretions on ovals or other sport settings is strongly discouraged. Do not share towels, water bottles or mouthguards. Mouthguards should not be handled during the session.

## Washing equipment

The following hygiene measures are recommended to continue to manage the risk of transmission:

- clean shared equipment between each use;
- continue to encourage patrons to bring their own equipment;
- implement hygiene measures following each classes;
- encourage patrons to wipe down equipment after each use; and
- gym supervisors should ensure regular cleaning is carried out during the day.

#### Increased cleaning and sanitation regime

It is important to ensure appropriate cleaning of common contact surfaces, 'high touch' items and shared amenities, such as handles, taps, lunch rooms, EFTPOS keypads and toilets. It is recommended that frequent cleaning in all areas is maintained. This is especially important in high traffic areas and any areas accessed by the public. If you think a surface may be contaminated, clean it with a common household disinfectant to kill the virus.

Cleaning products should be chosen that are approved for the surface to be cleaned. In general, combined detergent/disinfectant solutions or wipes are acceptable for hard surfaces. Some products such as bleach can damage fabrics, stainless steel and other surfaces. Businesses will have to continue to comply with any requirements regarding use of chemicals, including the use of Safety Data Sheets for chemicals utilised in the work place.

For most general cleaning tasks, a neutral detergent with pH between 6 and 8 should be used. The use of combined detergent / disinfectant wipes is acceptable, or solutions can be prepared fresh each day.

If using a bleach solution look for products which give you a 1000ppm (0.1%) bleach solution either neat or when diluted with water. Always follow the manufacturer's instructions if any detergent or disinfectant products require mixing with water or dissolving prior to use. Remember to never mix different cleaning products as in some instances toxic gases can be generated.

Refer to the Environmental cleaning in the workplace factsheet for further advice.

## Swimming pools, aquatic facilities

Aquatic Facilities will continue to have additional obligations under existing legislation and regulations, including obligations under the Health Act as well as Worksafe legislation. Some information regarding the existing conditions for operating Aquatic Facilities is provided below, for reference.

- Health (Aquatic Facilities) Regulations 2007
- Code of Practice for the Design, Construction, Operation, Management & Maintenance of Aquatic Facilities

#### Cleaning products

Chlorine-based disinfectants are effective for environmental cleaning and are the most commonly used. Other disinfectant products may also be effective at killing the virus. A list of effective disinfectants for use against COVID-19 can be found on the <u>United States Environmental Protection Agency (USEPA) website</u>. Contact time and dilution factors are important considerations for ensuring effective disinfection.

Bleach solutions should be made fresh daily as they become less effective over time.

The recommended concentration of available chlorine for routine disinfection of cleaned surfaces is 1000ppm as this concentration has been shown to be effective against the majority of microbial pathogens.

Cleaning chemicals should never be mixed together. The Material Safety Data Sheets (MSDS) and the manufacturers guidelines should always be followed.

Care should also be taken to ensure that the cleaning agent is appropriate for the item to be cleaned, for example, bleach may not be appropriate for some fabrics as it may damage the material.

## **Payments**

Promote cashless payments.

After handling money or cards, consider washing hands with soap and water, or an alcohol-based hand sanitiser.

## 3. Training and education

Organisations should regularly communicate restrictions, policies and procedures. This can be via hard copy notices around the venue, electronic communication and via a briefing.

The location of additional resources is listed at the end of these guidelines. These provide information that can be shared with staff and volunteers, and could displayed in your premises.

The Australian Infection Control training can be promoted where appropriate.

## 4. Compliance with existing legislation and regulations

In addition to the legal obligations arising from the Emergency Management Act and the Directions made under the Act, businesses will continue to have obligations under legislation and regulations, including Worksafe legislation.

If the venue has a food business, please refer to the requirements in the COVID Safety Guidelines for Food and Licensed venues.

Refer to the above regarding Aquatic Facilities.

Businesses also have requirements under the *Protection of Information (Entry Registration Information Relating to COVID-19 and Other Infectious Diseases) Act 2021,* specifically relating to the management, storage and disposal of contact registration information.

## 5. Response planning

Public health officials are responsible for responding in the event that a person with possible COVID-19 infection enters your premises, and will do so once notified. Please consider the following measures that can be undertaken to minimise further risk and assist public health officials to respond.

## Maintain attendance records

Accurate and relevant records of people attending your premises will assist Public Health officials with contact tracing in the event of a positive COVID-19 case in your premises. You are required to maintain attendance records for all visitors entering your premises. The below considerations may assist you in meeting your obligations:

- Display a QR Code at the entry of your business and at other accessible locations.
   Some businesses have chosen to place QR codes on tables to support accessibility of the QR Code for patrons.
- If you are using a QR Code which is separate to the SafeWA Code, you must also display the SafeWA QR Code. Access to SafeWA Codes can be found at: <a href="https://safewa.health.wa.gov.au/">https://safewa.health.wa.gov.au/</a>
- Make sure that you have a physical contact register available for patrons who do not use an electronic check in system. Templates for these registers can be found on the <u>Contact register stakeholder toolkit</u> page.
- Use of existing "fob key" or "RFID tag" systems are suitable to record attendance at the venue if it records the information required in line with the *Contact Register Directions* (No.2) (name, phone number, date and time of attendance)
- Where records are taken, other than in the ordinary course of business activities such as the fob key for gym access, they must not be used for purposes other than contact tracing (i.e. contact information is not to be used for marketing purposes).
- Make sure that you are storing records securely and disposing of relevant records appropriately as soon as practicable following the 28-day retention period.

You must ensure that you implement a process consistent with any privacy obligations you have for obtaining and safely maintaining records, noting the requirements now in effect under the *Protection of Information (Entry Registration Information Relating to COVID-19 and Other Infectious Diseases) Act 2021.* 

## **Responding to a COVID-19 incident**

If you are aware that someone with a case of COVID-19 has been in your workplace, ring the COVID-19 Public Hotline on 13COVID (13 26843) and follow the advice of public health officials. If there is concern that a person is not adhering to quarantine requirements, contact 13 COVID.

If someone is confirmed as having COVID-19 or is getting tested for COVID-19, they should already be at home. However, there may be circumstances where a person in your workplace is displaying COVID-like symptoms, such as a fever, cough, sore throat, shortness of breath and/or loss of smell/taste, or shares information (e.g. they have been in close contact with someone that has the virus) that causes you to have reasonable concerns about their health and the health of others in your workplace.

The person could be staff, a volunteer, a client, customer or other visitor to your premises. Where this occurs:

1. Inform your manager immediately, who should call public health and follow their advice.

If the person has serious symptoms such as difficulty breathing, call 000 for urgent medical help.

Otherwise, the manager is to call the state public health unit by contacting the COVID-19 Public Hotline on 13 COVID and follow their advice. People who are unwell may be asked to seek the advice of a healthcare practitioner and, if appropriate, attend a COVID-19 clinic.

## 2. Keep others away from the person

Take steps to prevent the person from potentially spreading the virus by keeping others away from the person. The measures must be reasonable.

## 3. Transport

If transportation is required, follow the advice of public health staff. When transportation is required for known or suspected cases of COVID-19, private vehicles are the preferred method of transportation. Further information related to the management and cleaning of vehicles used for transportation can be found in the Department of Health's <u>Vehicle cleaning following</u> suspected and confirmed COVID-19 passengers.

#### 4. Clean and disinfect

Follow all public health advice about closing off affected areas and prevent access until they have been cleaned and disinfected. Information on cleaning for non-healthcare settings during the coronavirus (COVID-19) pandemic can be found in the Department of Health's COVID-19 environmental cleaning in non-healthcare settings factsheet.

## 5. Assisting public health to identify close contacts

Public health may ask for your attendance records. The manager is to provide these records to public health upon request. In the event a positive case is identified, public health officers will conduct interviews with the confirmed case to determine their contacts.

## Review risk assessment

If there is concern about the risk of staff/volunteers being exposed to the virus at work, a risk assessment should be carried out with reference to the latest information available. Employers should develop prevention and control strategies appropriate to the workplace, in consultation with their staff/volunteers, and ensure that all staff/volunteers are aware of and follow these strategies.

Regularly review your COVID-19 risk management controls, in consultation with your staff/volunteers and their representatives, and assess and decide whether any changes or additional control measures are required. Consider having regular discussions about safety and health issues, for example during staff/volunteer meetings, or by setting up a safety committee.

## **Key Contacts**

 13COVID (13 268 43): For information about coronavirus measures and restrictions, and what they mean for you or if you suspect you, a staff member, volunteer or a customer may have COVID-19 symptoms or may have had close contact with a person who has COVID-19.

Dedicated Police Number: 131 444

# APPENDIX A – Checklist: Items to consider prior to reopening a business or premises

## 1. Physical distancing

- □ Physical distancing.
  - o If practicable is the furniture arranged to maintain 1.5 metre physical distance?
  - Are there physical distancing markers on the floor in areas where customers queue?
  - Consider how you will manage staff/volunteers in enclosed areas, are there any issues regarding staff/volunteers numbers in staff/volunteer areas?
  - Have you identified all situations, tasks and processes where staff/volunteers and others interact closely with each other and made any modifications if required?
  - Have you put in place measures to communicate and encourage staff/volunteers to practise physical distancing?
  - Have you reviewed shift arrangements to reduce interaction between staff/volunteers?
  - Have you encouraged staff/volunteers to maintain physical distancing during break times?

## 2. Hygiene

- □ Good hygiene
  - Are adequate hand washing and hand sanitising stations provided? Check hand washing facilities are in good working order and adequately stocked (soap, hot water, paper towel, hand sanitiser)
  - o Has signage about hand hygiene been provided?
  - Are processes in place to regularly monitor and review hygiene stations/measures?
- ☐ Cleaning and sanitisation
  - Have you considered the frequency of cleaning for public areas?
  - Are procedures in place for thorough and regular cleaning of common surfaces, 'high touch' items and shared amenities e.g. handles, tables, chairs and toilets?
  - Have communal items been removed where possible e.g. self-serve stations (cutlery, water, condiments)?
  - Does your business have appropriate cleaning products and equipment to perform cleaning and disinfection e.g. detergent, disinfectant, food grade sanitiser, PPE where appropriate?
  - Are all food contact surfaces effectively cleaned and sanitised?
  - Have you instructed staff/volunteers to clean personal property e.g. phones and keys?
- ☐ Personal Protective Equipment (PPE)
  - o Where you have identified the need for PPE, do you have adequate stock?
  - o Have staff/volunteers been adequately trained in how and when to wear PPE?

## 3. Training and education

| Have you provided information to staff/volunteers on your COVID safety procedures |
|---|
| and what is expected of them?   |
| Where appropriate, have staff/volunteers completed training?                      |
| Have you provided clients with information on your COVID safety procedures,       |
| including not attending the premises if unwell?                                   |

## 4. Compliance with existing legislation and regulations

| ш | 13 your business continuing to meet obligations ander existing legislation:      |
|---|--|
|   | Have you contacted your local government authority, the Department of Health, or |
|   | WorkSafe if you are unsure of public health or occupational health and safety    |
|   | requirements?  |
|   |  |

□ Is your business continuing to meet obligations under existing legislation?

## 5. Response planning

- □ Monitor symptoms
  - Have you put up signs about the symptoms of COVID-19 in the workplace?
  - o Have you advised staff/volunteers stay home if they are unwell?
  - Have you advised staff/volunteers to disclose if they have been in close contact with a person who has or is being tested for COVID-19?
  - Have you encouraged staff/volunteers to get vaccinated?

#### □ Contact tracing

- Are you maintaining contact tracing records for the purposes of contact tracing?
- Are you providing a hard copy option for contact registration purposes?
- Are you storing records appropriately?
- Are you disposing records appropriately?
- Are you maintaining a record of staff/volunteers working on the premises?

#### □ Incident response

 Does your business have written instructions for staff/volunteers about how to respond to a COVID-19 related incident?
